Memorandum for the Record Re: 3 Mil Milar Base Film Disposition

It has been recommended to [REDACTED] that in addition to testing the 3 Mil Milar film by Ansco which is being sent to [REDACTED] for extensive testing with Project "C" that a 800' roll be shipped immediately to [REDACTED] for testing by [REDACTED] group to cross check the results under simulated operating conditions. The persons concerned have been warned not to divulge this action to either [REDACTED] as it would probably cause some commotion which is not necessary at this time. It is felt that the capabilities for the test to be done with [REDACTED] are certainly as pertinent, if not more so, than those at [REDACTED]. It is recalled that if these tests prove successful we can save the 9½" material which was intended for "B" testing so that this material may well become our first operational load. I would like to emphasize the importance at this time because results from the last 3 chamber tests at LMSD have been failures due to film breakage.
